

Automation Opportunity Audit

Marketing Operations and Performance Management

Marketing team executes weekly reporting, lead management, content planning, and daily campaign optimization to drive pipeline growth and marketing efficiency.

Original Input

Task 1 Name: Weekly performance report compilation Description: Pull data from Google Analytics, HubSpot, and LinkedIn Ads into a spreadsheet, calculate KPIs (CTR, CPC, conversion rate, MQL volume), and write a summary for the marketing director. Frequency: Weekly | Time: 90 min Task 2 Name: Lead scoring and CRM data cleanup Description: Review new leads in HubSpot, assign scores based on firmographic and behavioral criteria, merge duplicates, and update contact properties for segmentation. Frequency: Weekly | Time: 60 min Task 3 Name: SEO content brief creation Description: Research target ...

AI Readiness Assessment

73 / 100

Overall AI Readiness

How prepared your organisation is for AI automation based on data quality, process documentation, tool maturity and team skills.

Data Quality	82
Process Clarity	73
Tool Maturity	79
Error Tolerance	58

Detailed Task Analysis

1 Monitor Google Ads daily performance

90%

HIGH

Description	Review Google Ads dashboard for daily performance metrics including CTR, CPC, conversion rate, and ROAS across all active campaigns. Inputs: Google Ads account access. Output: performance status assessment.		
Frequency	Daily		
Time per Task	15 min		
Category	Analysis		
Implementation	Easy		
Annual Savings	61.2 hrs / €3,062		
Recommendation	Option 1 - Google Ads scripts + daily Slack digest (€0): native JavaScript in Google Ads, pulls metrics, posts summary to Slack at 8am daily. Setup 2h (one-time), no cost. Recommended. Option 2 - Data Studio + automated email (free): live dashboard + scheduled email digest. Option 3 - Supermetrics (€99/month): aggregates Google Ads + Meta into single dashboard. Recommendation: Use Google Ads scripts + Slack for speed and zero cost. Pre-define alert thresholds: CTR drop >20%, CPC spike >15%, ROAS drop >25%. Setup 2h, payback immediate.		
Repeatability			90
Data Avail.			95
Error Tol.			85
Integration			95
Risk	Daily monitoring is status-only; ensure alert thresholds are calibrated (excessive alerts cause alert fatigue and decision paralysis).		
Agentification	Full Delegation		
Milestone	30 consecutive days of accurate daily performance digests, zero false-positive alerts, and <3 alerts per week on average.		
Pipeline	Google Ads Api > Daily Script Execution (8Am) > Metrics Pulled (Ctr, Cpc, Conversion, Roas) > Status Message Posted To Slack + Flagged If Thresholds Breached. You Receive Digest Passively; No Action Required Unless Alert Fires.		

2 Calculate marketing KPIs

90%

HIGH

Description	Compute click-through rate (CTR), cost-per-click (CPC), conversion rate, and MQL volume from extracted data using spreadsheet formulas. Inputs: consolidated data. Output: calculated KPI metrics.		
Frequency	Weekly		
Time per Task	20 min		
Category	Analysis		
Implementation	Easy		
Annual Savings	17.0 hrs / €849		
Recommendation	Option 1 - Google Sheets with pre-built formula templates (free): set $CTR = (\text{clicks} / \text{impressions})$, $CPC = (\text{spend} / \text{clicks})$, $\text{conversion_rate} = (\text{conversions} / \text{clicks})$, $MQL_volume = \text{sum}$. Setup 1h, maintenance 0. Option 2 - Data Studio report + automated calculations (free): creates live dashboard, eliminates spreadsheet friction entirely. Recommendation: Migrate to Data Studio; formulas auto-update when source data refreshes, eliminating manual recalc.		
Repeatability			95
Data Avail.			90
Error Tol.			92
Integration			85
Risk	Formula errors compound; validate benchmarks annually or after data structure changes.		
Agentification	Full Delegation		
Milestone	12 consecutive weeks of automated KPI calculation with variance <2% vs. manual spot-checks.		
Pipeline	Task 1 Output (Consolidated Data) > Data Studio Import > Formula Layer Auto Calculates Metrics > Live Dashboard. Weekly Email Digest Triggered On Schedule.		

3 Monitor Meta Ads daily performance

89%

HIGH

Description	Review Meta Ads Manager for daily performance metrics including spend, impressions, CTR, and conversion rate across all active campaigns. Inputs: Meta Ads account access. Output: performance status assessment.		
Frequency	Daily		
Time per Task	10 min		
Category	Analysis		
Implementation	Easy		
Annual Savings	40.4 hrs / €2,021		
Recommendation	Option 1 - Meta Ads Manager + native scheduled report (free): built-in daily email digest of spend, impressions, CTR, conversion by campaign. Setup 30min. Option 2 - Zapier + Meta API (€25/month): pulls data, posts to Slack, more flexibility. Option 3 - Supermetrics (€99/month): unified dashboard. Recommendation: Meta native scheduled report + optional Zapier for Slack redundancy. Setup 1h total, payback immediate.		
Repeatability			90
Data Avail.			92
Error Tol.			85
Integration			90
Risk	Meta API is less stable than Google Ads; ensure fallback notification if API call fails.		
Agentification	Full Delegation		
Milestone	30 consecutive days of accurate daily reports, zero missed notifications, <5% variance vs. manual spot-checks.		
Pipeline	Meta Ads Api (Via Scheduler) > Daily Report Generation (8Am) > Email Digest + Slack Notification > You Receive Passively. No Action Required Unless Alert Fires (Task 12).		

4 Update CRM contact properties for segmentation

87%

HIGH

Description	Modify contact records in HubSpot with segmentation criteria and enriched properties based on lead scoring and firmographic analysis. Inputs: scored leads. Output: updated contact database with segmentation tags.		
Frequency	Weekly		
Time per Task	15 min		
Category	Data Entry		
Implementation	Easy		
Annual Savings	12.3 hrs / €618		
Recommendation	Option 1 - HubSpot workflows (free): triggered by lead score + firmographic fields -> auto-assigns segmentation tags (e.g., "enterprise-tech-buyer", "SMB-services"). Setup 2h, no ongoing cost. Recommended. Option 2 - Zapier + custom rules (€25/month): same outcome, requires external logic. Recommendation: Use HubSpot workflows; native integration eliminates tool fragmentation. Pre-build tag taxonomy (v1.0) with marketing/sales alignment. Review and version tags quarterly.		
Repeatability			92
Data Avail.			85
Error Tol.			80
Integration			92
Risk	Segmentation tags are business-critical for campaign targeting; ensure tag taxonomy is documented and rules are versioned.		
Agentification	Full Delegation		
Milestone	10 consecutive weeks of 100% accuracy in segmentation tag assignment, verified via random audits of n=30 contacts/week.		
Pipeline	Task 4 (Scored Leads) > Hubspot Workflow Trigger On Firmographic Match + Score Threshold > Auto Applies Segmentation Tags > Tagged Contact Available For Campaign Targeting Immediately. No Human Intervention.		

5 Extract analytics data from multiple sources

86%

HIGH

Description	Pull performance metrics from Google Analytics, HubSpot, and LinkedIn Ads platforms and consolidate into a single spreadsheet for analysis. Inputs: API access to three platforms. Output: consolidated raw data file.		
Frequency	Weekly		
Time per Task	25 min		
Category	Data Entry		
Implementation	Easy		
Annual Savings	20.6 hrs / €1,029		
Recommendation	Option 1 - Zapier + API connectors (€25/month): pulls data on schedule, maps to Google Sheets, no custom code needed, setup 2h, payback 3 weeks. Option 2 - Make.com (formerly Integromat, €12/month): visual workflow builder, same functionality, setup 3h. Option 3 - Native integration via Google Data Studio (free): eliminates manual export but requires platform buy-in. Recommendation: Use Zapier given low cost and native HubSpot/Google Analytics integrations already mature.		
Repeatability			90
Data Avail.			85
Error Tol.			88
Integration			80
Risk	Data extraction is deterministic; ensure API credentials are rotated and stored securely.		
Agentification	Full Delegation		
Milestone	8 consecutive weeks of error-free data consolidation with zero manual corrections needed.		
Pipeline	Automated Weekly Trigger > Api Calls To Three Platforms > Data Validation Check (Schema Match) > Consolidated Csv Deposit In Shared Folder. No Human Intervention In Normal Flow.		

6 Identify and merge duplicate CRM records

82%

HIGH

Description	Detect duplicate contact entries in HubSpot and consolidate into single master records. Inputs: HubSpot database. Output: deduplicated contact database.		
Frequency	Weekly		
Time per Task	20 min		
Category	Administrative		
Implementation	Easy		
Annual Savings	15.6 hrs / €780		
Recommendation	Option 1 - HubSpot native duplicate detection + merge (free): runs on schedule, flags duplicates by email/phone/company, you approve merges before execution. Setup 1h, ongoing review 5min/week. Recommended for safety. Option 2 - Clearbit Enrichment + duplicate automation (€250/month): more aggressive matching but higher false-positive risk; requires confidence threshold tuning. Option 3 - Custom Zapier workflow (€50/month + 4h setup): pulls records, runs fuzzy match on email/name/domain, flags for manual review. Recommendation: HubSpot native + weekly manual audit of flagged duplicates. Safer than full automation given merge irreversibility.		
Repeatability			85
Data Avail.			80
Error Tol.			75
Integration			90
Risk	Merge errors cascade to all downstream workflows (email, scoring, reporting); false merges delete contact history; AI must be audit-logged.		
Agentification	Supervised		
Milestone	8 consecutive weeks of zero false-positive merges (0 complaints from sales team), with HubSpot audit log confirming all merges approved pre-execution.		
Pipeline	Weekly Scheduled Run > Hubspot Detects Duplicates (Email/Phone Match, Domain + Name Match) > Flags For Review > You Approve In Bulk (5Min) > Merges Execute With Audit Trail. You Retain Veto Power.		

7 Pause underperforming ad sets

82%

HIGH

Description Disable ad sets and individual ads in Google Ads and Meta that fall below performance thresholds (CTR, CPC, ROAS). Inputs: performance analysis, performance benchmarks. Output: paused ad sets and updated campaign structure.

Frequency Daily

Time per Task 3 min

Category Administrative

Implementation Medium

Annual Savings 11.5 hrs / €575

Recommendation AI layer -- Google Ads scripts + Meta API automation (€0): flags ad sets / ads where CTR baseline+40%, ROAS <1.5x target. Decision layer -- You: (1) review flagged ads daily, (2) assess performance context (is ad in learning phase? Has budget shifted? Seasonal dip?), (3) decide: pause, adjust bid, or keep-and-monitor. DO NOT auto-pause; human approval required. Workflow: script flags underperformers -> email to you 8am -> you approve/reject pauses by 10am -> API executes pauses post-approval. Setup 4h, payback 2 weeks (saves manual review time while retaining control).

Repeatability 85

Data Avail. 90

Error Tol. 50

Integration 92

Risk Pausing ads is irreversible and impacts daily revenue (€1k-10k/day depending on spend); threshold miscalibration (too aggressive) leads to over-pausing and lost revenue. AI cannot know if underperformance is temporary (learning phase) or structural.

Agentification Supervised

Milestone 8 consecutive weeks where you pause >80% of AI-flagged underperformers and zero pauses are regretted (no "should have paused earlier" or "paused too aggressively" feedback from performance review).

Pipeline Tasks 10 & 11 (Daily Performance Data) > Thresholds Defined > Script Flags Underperformers > Email Alert To You > You Approve/Reject In Bulk (2Min) > Api Pauses Approved Ads. You Retain Veto On All Pauses.

8 Adjust bids on high-performing keywords

81%

HIGH

Description Increase bid amounts in Google Ads for keywords and ad groups exceeding performance targets and ROI thresholds. Inputs: performance data, budget allocation strategy. Output: updated bid structure.

Frequency Daily

Time per Task 2 min

Category Administrative

Implementation Medium

Annual Savings 7.5 hrs / €375

Recommendation AI layer -- Google Ads scripts (€0): identifies keywords where ROAS >2.5x target + CTR >baseline+25% -> calculates recommended bid lift (e.g., +10-20% increase). Decision layer -- You: (1) review flagged keywords daily, (2) assess total daily spend impact (sum all recommended lifts), (3) check against monthly budget runway, (4) approve subset of lifts that keep daily spend within guardrails, (5) reject lifts if budget is at risk. Workflow: script flags high-performers -> summarizes total lift impact (€XXX/day) -> email to you 8am -> you approve bulk % of lift (e.g., "approve 50% of recommended lifts today") -> API adjusts. Setup 4h, payback 2 weeks.

Repeatability 88

Data Avail. 90

Error Tol. 55

Integration 92

Risk Bid increases compound over time (€100 increase * 10 keywords = €1k/day extra spend); without holistic budget review, daily micro-optimizations can overspend monthly budgets. AI cannot know if overall campaign budget is constrained or unlimited.

Agentification Supervised

Milestone 8 consecutive weeks where bid increases you approve result in net ROAS improvement >5% month-over-month, and monthly spend variance <5% vs. budget.

Pipeline Tasks 10 & 11 Data > Script Identifies High Performers + Calculates Bid Lift Recommendations > Summarizes Total Daily Spend Impact > Email Alert To You > You Approve Spend Envelope > Api Adjusts Bids Within Approval. Handoff: Ai Surfaces Optimization Candidates; You Allocate Budget.

9 Research target keywords for content

68%

MEDIUM

Description Use Ahrefs or Semrush to identify and validate target keywords for content strategy. Inputs: topic assignment, business goals. Output: ranked keyword list with search volume and difficulty metrics.

Frequency Weekly

Time per Task 30 min

Category Analysis

Implementation Medium

Annual Savings 15.6 hrs / €780

Recommendation AI layer -- Ahrefs API + Claude/GPT (€99/month Ahrefs + €5/month API): queries search volume, keyword difficulty, SERP composition for seed topics, ranks by traffic potential and competitive density, suggests 50-100 keyword variants with metrics. Decision layer -- You: (1) validate keyword intent against buyer journey (awareness vs. consideration vs. decision), (2) cross-check against sales' top customer pain points and deal drivers, (3) weight keywords by business priority (e.g., "demo request" keywords > "educational" keywords), (4) identify content gaps your competitors miss. AI surfaces data; you decide strategic focus. Use AI to eliminate <5 search volume / >60 difficulty keywords automatically, but human reviews top 20 finalists. Setup 4h, payback 6 weeks.

Repeatability 65

Data Avail. 90

Error Tol. 45

Integration 75

Risk Keyword selection drives content budget allocation (€5k+/month for writers, tools); AI can miss intent nuance or overweight short-tail keywords that are competitive but low-revenue; misalignment with sales motion wastes content spend.

Agentification Supervised

Milestone 3 consecutive months where AI-ranked keyword list includes >80% of keywords you ultimately prioritize, and content derived from those keywords achieves >1.2x expected traffic vs. prior quarters.

Pipeline Topic Input > Api Queries Ahrefs > Llm Ranks Results By Business Intent + Traffic + Difficulty > Ranked List (Csv) > You Review Top 20, Validate Intent, Cross Reference Sales, Finalize List > Fed To Task 9. Handoff: Ai Surfaces Ranked Candidates With Metrics; You Apply Business Judgment On Relevance And Strategic Weight.

10 Review and score new leads in CRM

66%

MEDIUM

Description	Assess new leads in HubSpot against firmographic and behavioral scoring criteria. Inputs: new lead records. Output: scored lead records with assigned point values.
Frequency	Weekly
Time per Task	25 min
Category	Analysis
Implementation	Medium
Annual Savings	10.8 hrs / €542
Recommendation	AI layer -- HubSpot native scoring workflows or Clearbit + custom rules engine (€50-150/month): flags leads meeting firmographic criteria (company size, industry, job title, engagement level), auto-assigns points per rubric. Decision layer -- You define and validate scoring thresholds quarterly based on: (1) win rate analysis by segment, (2) sales feedback on lead quality, (3) conversion funnel data. AI executes the rules; you own the ruleset. First month: run AI scoring in parallel to your manual scoring, compare outputs. Where AI diverges, investigate root cause (missing data, wrong threshold, or AI actually right?). Use Zapier to flag anomalies for your review. Setup 6h, payback 6 weeks once calibrated.
Repeatability	70
Data Avail.	75
Error Tol.	40
Integration	80
Risk	Lead scoring thresholds embed implicit business rules (e.g., "software engineers matter more than IT managers"); AI cannot infer these without explicit training on historical conversions tied to firmographic attributes; miscalibration crushes sales efficiency.
Agentification	Supervised
Milestone	4 consecutive weeks where AI-scored leads show >90% agreement with your spot-check (n=20 random leads per week), and sales team confirms quality parity vs. prior manual scoring.
Pipeline	New Leads In Hubspot > Automated Scoring Workflow (Firmographic Match) > Anomaly Alert If Score Deviates >2 Sd From Baseline > You Review Flagged Leads > Feedback Loop Calibrates Thresholds > Updated Workflow Runs. Handoff: Ai Surfaces Candidates And Scores; You Validate Rules Align With Business Reality.

11 Analyze competitor content ranking

64%

MEDIUM

Description	Review content pieces from competing domains ranking for target keywords to identify content gaps and positioning opportunities. Inputs: keyword list, competitor URLs. Output: competitive content analysis document.
Frequency	Weekly
Time per Task	25 min
Category	Analysis
Implementation	Medium
Annual Savings	11.9 hrs / €596
Recommendation	AI layer -- Ahrefs Content Gap tool or manual + Claude API (€99/month Ahrefs): pull top 10 SERP results per keyword, extract headings/sections/word counts, identify coverage patterns. LLM summarizes: what topics are covered, what's missing, tone/format of top performers. Decision layer -- You: (1) assess whether identified gaps align with your unique perspective/expertise (can you write better?), (2) evaluate if gap is a gap or a non-issue (maybe competitors don't cover it because it's not valuable), (3) determine positioning angle that differentiates you, (4) weight effort vs. ROI (will gap content drive conversions?). AI surfaces content map; you decide strategy. Output: annotated competitive analysis + your strategic prioritization. Setup 3h, payback 5 weeks.
Repeatability	60
Data Avail.	85
Error Tol.	40
Integration	70
Risk	Competitive analysis informs content positioning worth €20k+ in writer time; AI may misidentify gaps (e.g., seeing no content on "topic X" because it's a non-entity, not opportunity) or overweight quantity vs. depth; positioning decisions embed go-to-market assumptions that cannot be delegated.
Agentification	Supervised
Milestone	4 consecutive pieces of content derived from AI-identified gaps, where >75% achieve top-5 rankings for target keywords within 6 months, and traffic-to-lead conversion >= industry benchmark.
Pipeline	Keyword List (Task 7) > Ahrefs Api Pulls Serp Data > Llm Extracts Content Patterns And Gaps > Summarized Analysis (Markdown) > You Review, Cross Reference With Product Roadmap/Expertise, Annotate Strategic Gaps > Finalized Gap Analysis Fed To Task 9. Handoff: Ai Surfaces Competitive Landscape; You Decide Which Gaps Are Real Opportunities Vs. Distractions.

12 Write weekly performance summary

57%

MEDIUM

Description	Author narrative summary of KPI results, trends, and insights for marketing director. Inputs: calculated KPIs. Output: executive summary document.		
Frequency	Weekly		
Time per Task	45 min		
Category	Communication		
Implementation	Medium		
Annual Savings	15.6 hrs / €780		
Recommendation	AI layer -- Claude API or ChatGPT API (€1-3/week): ingests KPI CSV, generates initial trend narrative, highlights outliers, drafts talking points. Decision layer -- You review, reframe key insights for director's priorities, add strategic context (market conditions, campaign changes, competitor moves), validate all claim accuracy, and sign off. Human must rewrite 30-40% to inject organizational narrative. Use Zapier + API to auto-send draft to you by Tuesday 9am; you edit Wednesday morning. Setup 4h, payback 8 weeks.		
Repeatability			55
Data Avail.			80
Error Tol.			35
Integration			70
Risk	AI-generated summaries may miss business context, misinterpret trends, or frame insights in ways misaligned with stakeholder priorities; narrative voice carries credibility risk.		
Agentification	Supervised		
Milestone	6 consecutive weeks where AI-generated summary requires <25% rewrite by you, and director confirms no narrative misalignment.		
Pipeline	Task 2 Kpis > Api Call To Llm > Draft Summary (Markdown) > Email To You With Red Line Edit Interface > You Approve/Modify > Exported Pdf To Director. Handoff: Ai Surfaces Data Story; You Decide Strategic Framing And Business Narrative.		

13 Create structured SEO content brief

56%

MEDIUM

Description Synthesize keyword research and competitive analysis into detailed content brief with outline, word count, internal linking strategy, and success metrics for content writer. Inputs: keyword research, competitive analysis. Output: formatted content brief document.

Frequency Weekly

Time per Task 20 min

Category Creative

Implementation Hard

Annual Savings 6.1 hrs / €303

Recommendation AI layer -- Claude/GPT + brief template (€3/use): synthesizes Tasks 7 & 8 inputs (keywords, competitors, gaps) + your brand voice guidelines -> generates draft brief with outline, word count targets (800-2000), internal linking suggestions, success metrics (rank position, traffic target), and call-to-action framing. Decision layer -- You: (1) refine outline to match audience journey and conversion intent, (2) inject brand voice and narrative authority, (3) set word count and depth based on topic/competition/your resource constraints, (4) specify internal linking strategy aligned with funnel (awareness content -> product docs -> demo page), (5) define success metric tied to business outcome (e.g., "500+ organic visits within 60 days, +5% demo requests from this page"). You rewrite 40-60% of AI draft to inject strategy and voice. Setup 2h (template + guidelines), payback 4 weeks.

Repeatability 50

Data Avail. 80

Error Tol. 30

Integration 65

Risk Content brief encodes messaging strategy and writer direction; weak briefs cause rework (€500+ lost writer time); AI-generated briefs miss voice, brand narrative, and business urgency context. This task requires editorial judgment and internal knowledge.

Agentification Human-in-Loop

Milestone 3 consecutive briefs where writer indicates "brief was clear and required zero clarification questions" + resulting content achieves >90% of traffic/conversion targets within 90 days.

Pipeline

Tasks 7 & 8 Outputs > Template + Voice Guidelines > Llm Generates Draft Brief > You Review, Rewrite Outline, Set Metrics, Finalize > Published Brief > Sent To Writer. Handoff: Ai Synthesizes Data; Human Writes The Strategy Layer. No Delegation Here.

14 Curate industry news for newsletter

54%

MEDIUM

Description	Research and select 5-8 relevant industry news items and trends for inclusion in monthly marketing newsletter. Inputs: industry sources and publications. Output: curated news list with URLs and relevance notes.
Frequency	Monthly
Time per Task	45 min
Category	Creative
Implementation	Medium
Annual Savings	4.1 hrs / €203
Recommendation	AI layer -- News API (€100/month) + Claude (€5/month): monitors 50-100 industry sources (RSS feeds, APIs) daily, filters by keywords aligned to your vertical, ranks by relevance + social momentum. LLM summarizes each article (1-2 sentences) and flags as "trending", "expert analysis", "tool launch", etc. Decision layer -- You: (1) browse AI-curated list (15min), (2) select 5-8 items that fit newsletter theme and audience needs (e.g., "this month's focus is AI governance"), (3) add your own editorial commentary ("why this matters to our audience"), (4) reject AI picks if off-brand or niche. AI surfaces candidates; you curate for strategy and voice. Setup 3h (RSS feeds + filters), payback 3 weeks.
Repeatability	50
Data Avail.	60
Error Tol.	45
Integration	65
Risk	News curation reflects brand voice and audience relevance; AI may surface high-traffic news items that are off-brand or irrelevant to your audience; editorial judgment is non-delegable.
Agentification	Supervised
Milestone	6 consecutive months where subscriber engagement (open rate, click rate) on curated news section is >15% above baseline, indicating audience finds selections relevant.
Pipeline	News Api Monitors Sources (Daily) > Llm Filters + Summarizes Candidates > Ranked List Emailed To You 1St Of Month > You Select 5 8 + Add Notes > Finalized News List Fed To Task 15. Handoff: Ai Surfaces And Summarizes Candidates; You Apply Editorial Judgment And Voice.

15 Design newsletter email template

50%

MEDIUM

Description	Create visual layout and formatting of monthly newsletter in Mailchimp including headers, sections, images, and call-to-action buttons. Inputs: editorial content, brand guidelines. Output: formatted email template.
-------------	--

Frequency	Monthly
-----------	---------

Time per Task	40 min
---------------	--------

Category	Creative
----------	----------

Implementation	Medium
----------------	--------

Annual Savings	2.0 hrs / €100
----------------	----------------

Recommendation	Review task manually for automation opportunities.
----------------	--

Risk	Safe to automate fully.
------	-------------------------

Agentification	Phase 1: Human-in-Loop AI Draft
----------------	---------------------------------

Milestone	Pilot AI drafts on 20% of volume; measure error rate before scaling.
-----------	--

Pipeline	Human Oversight Required Ai Assists With Drafting Only.
----------	---

16 Configure audience segmentation for newsletter

50%

MEDIUM

Description	Set up subscriber segmentation rules in Mailchimp based on engagement level, content preference, and demographic criteria for targeted newsletter delivery. Inputs: subscriber database, segmentation strategy. Output: configured audience segments.
-------------	---

Frequency	Monthly
-----------	---------

Time per Task	20 min
---------------	--------

Category	Administrative
----------	----------------

Implementation	Medium
----------------	--------

Annual Savings	1.0 hrs / €50
----------------	---------------

Recommendation	Review task manually for automation opportunities.
----------------	--

Risk	Safe to automate fully.
------	-------------------------

Agentification	Phase 1: Human-in-Loop AI Draft
----------------	---------------------------------

Milestone	Pilot AI drafts on 20% of volume; measure error rate before scaling.
-----------	--

Pipeline	Human Oversight Required Ai Assists With Drafting Only.
----------	---

17 Schedule and send newsletter

50%

MEDIUM

Description Schedule monthly newsletter send in Mailchimp for optimal send time and execute deployment to all segmented audiences. Inputs: finalized template, audience segments. Output: scheduled and deployed campaign.

Frequency Monthly

Time per Task 15 min

Category Administrative

Implementation Medium

Annual Savings 0.8 hrs / €38

Recommendation Review task manually for automation opportunities.

Risk Safe to automate fully.

Agentification Phase 1: Human-in-Loop AI Draft

Milestone Pilot AI drafts on 20% of volume; measure error rate before scaling.

Pipeline Human Oversight Required Ai Assists With Drafting Only.

18 Write editorial commentary for newsletter

37%

LOW

Description Author 2-3 original editorial pieces providing commentary, insights, and strategic perspective on curated industry news and marketing trends. Inputs: curated news, organizational expertise. Output: editorial content pieces.

Frequency Monthly

Time per Task 60 min

Category Creative

Implementation Hard

Annual Savings 1.8 hrs / €90

Recommendation AI layer -- Claude/GPT (€5/month): ingests curated news items (Task 14) + brief your strategic POV ("focus on data privacy implications") -> generates 2-3 draft editorial angles, outlines, talking points. Human layer (you) -- writes final 2-3 pieces (60min), using AI drafts as starting point if helpful. You write the actual commentary; AI only expedites research/ideation. DO NOT publish AI-written editorial under your byline. Use AI to: brainstorm angles, outline structure, find supporting quotes/examples. You write final prose. Setup 2h, payback 4-6 weeks (AI reduces blank-page time).

Repeatability 30

Data Avail. 50

Error Tol. 20

Integration 40

Risk Editorial content is your personal voice and professional reputation; AI-generated commentary risks: misrepresenting your perspective, making unsupported claims, or adopting tone misaligned with brand. This is NOT delegable to AI.

Agentification Human-in-Loop

Milestone Pilot AI drafts on 20% of volume; measure error rate before scaling.

Pipeline Human Oversight Required Ai Assists With Drafting Only.

Implementation Roadmap

Phase 1 — Quick Wins

0–3 months

High score + easy setup = immediate ROI.

- > **Monitor Google Ads daily performance** Score 90% · 61 hrs saved
- > **Calculate marketing KPIs** Score 90% · 17 hrs saved
- > **Monitor Meta Ads daily performance** Score 89% · 40 hrs saved
- > **Update CRM contact properties for segmentation** Score 87% · 12 hrs saved
- > **Extract analytics data from multiple sources** Score 86% · 21 hrs saved
- > **Identify and merge duplicate CRM records** Score 82% · 16 hrs saved

Phase 2 — Medium-Term

3–6 months

Technical setup required but significant savings.

- > **Pause underperforming ad sets** Score 82% · 12 hrs saved
- > **Adjust bids on high-performing keywords** Score 81% · 8 hrs saved
- > **Research target keywords for content** Score 68% · 16 hrs saved
- > **Review and score new leads in CRM** Score 66% · 11 hrs saved
- > **Analyze competitor content ranking** Score 64% · 12 hrs saved
- > **Write weekly performance summary** Score 57% · 16 hrs saved
- > **Curate industry news for newsletter** Score 54% · 4 hrs saved
- > **Design newsletter email template** Score 50% · 2 hrs saved
- > **Configure audience segmentation for newsletter** Score 50% · 1 hrs saved
- > **Schedule and send newsletter** Score 50% · 1 hrs saved

Phase 3 — Advanced

6–12 months

Complex automations and custom development.

- > **Create structured SEO content brief** Score 56% · 6 hrs saved

Your role is highly automatable. Now is the time to pivot to higher human-edge functions.

Career Pivot Recommendations

Skills to Develop Now

threshold calibration · alert management · performance interpretation · Google Ads API literacy · Slack integration · formula design

Adjacent Roles — Lower AI Risk

Role	AI Risk	Pivot Distance
PPC Manager	low (91%)	easy
Performance Marketing Specialist	low (89%)	easy
Marketing Operations Manager	low (88%)	medium
Analytics Analyst	low (94%)	easy
BI Analyst	low (91%)	medium

90-Day Action Plan: Identify the top 2 skills above. Spend 1 hour/day practising with AI tools (Claude, Perplexity, Replit). Build one public project. This moves you from replacement target to AI-empowered operator.

Conclusion

This analysis identified automation opportunities across **18 tasks** in **Marketing Operations and Performance Management**. Implementing recommendations could save **256 hours annually**, worth approximately **€12,790**.

- > Begin with Phase 1 quick wins — ROI within weeks, not months.
- > Use human-in-the-loop for tasks scored 40–70 to reduce risk.
- > Track time saved monthly to measure and communicate impact.
- > Revisit quarterly — new AI tools appear constantly.
- > Train team members on newly automated workflows.
