AI Readiness Assessment

79 / 100

Overall AI Readiness

How prepared your organisation is for AI automation based on data quality, process documentation, tool maturity and team skills.

Data Quality	81
Process Clarity	81
Tool Maturity	80
Error Tolerance	71

Detailed Task Analysis

1 Maintain the contract and document repository

91%

HIGH

Description	File executed documents, tag metadata, keep the repository searchable and current
Frequency	Weekly
Time per Task	45 min
Category	Data Entry
Implementation	Easy
Annual Savings	35.9 hrs / €1,794

Recommendation

Option 1 -- DMS Automation (Recommended): Integrated Document Management System (NetDocuments, ShareFile, M-Files). €3,000-6,000/year. Auto-extracts metadata (contract type, counterparty, execution date, renewal date) from document headers via OCR + NLP. Tags contracts automatically. Maintains version control and access logs. Setup 2-3 weeks (template configuration, metadata schema definition). Payback 8-10 weeks (45min/week 52 = 39 hours/year €975).

Option 2 -- Budget Alternative: Google Drive + Zapier + Metadata Tagging Script. €50-80/month. Auto-organizes by folder structure; limited automated tagging. Setup 1 week. Less capable but sufficient for small repositories (<5,000 documents). Option 3 -- Custom Build: Use Python + document parsing library (pdfplumber) + PostgreSQL backend for €1,500 setup + €200/month. Highest flexibility for org-specific taxonomy. Implement full-text search + API for external integrations. All three options should include bulk historical remediation (tag all existing documents) in week 1 using batch processing to avoid queue backlog.

Repeatability	94
Data Avail.	92
Error Tol.	90
Integration	88

Score confidence: **High** (how much the four sub-scores agree)

Risk

Metadata tagging inconsistency could degrade searchability; implement validation rules to enforce controlled vocabularies.

Agentification

Phase 1: Human-in-Loop

Milestone 95% of new documents auto-tagged and searchable within 24 hours of execution; repository query response time <2 seconds; zero tag-validation errors over 3 months.

Pipeline

Fully Automated Pipeline Document Receipt > Ocr/Text Extraction > Metadata Extraction + Auto Tagging > Repository Indexing > Full Text Search Availability. Zero Human Decision Making. All Validation Rule Based. Audit Trail Logs All Tagging Actions For Compliance.

2 Track compliance deadlines, filings and renewals

89%

HIGH

Description	Maintain a calendar of obligations, send reminders, confirm completion
Frequency	Weekly
Time per Task	30 min
Category	Management
Implementation	Easy
Annual Savings	22.9 hrs / €1,144

Recommendation

Option 1 -- Calendar + Automation (Recommended): Zapier + Google Calendar + email reminders. €30-50/month. Ingest compliance deadlines from spreadsheet/database, auto-create calendar events with 2-week prior reminders, trigger escalation emails to responsible parties. Setup 1 week. Payback 4-5 weeks (30min/week 52 = 26 hours/year €650).

Option 2 -- Dedicated Compliance SaaS: Workiva, Domo Governance. €5,000-8,000/year. Centralizes deadline tracking, audit trails, completion sign-off. Better for regulated industries. Setup 2-3 weeks. Option 3 -- Hybrid (Best for small teams): Google Sheets + Apps Script (custom trigger). €0 + 4 hours setup. Auto-sends Slack/email reminders based on date proximity. Less polished but highly customizable. Implement 2-factor confirmation (responsible party acknowledges reminder) to eliminate silent failures.

Repeatability	92
Data Avail.	90
Error Tol.	85
Integration	87

Score confidence: **High** (how much the four sub-scores agree)

Risk

Calendar misconfiguration could cause missed regulatory filings; however, AI errors are prevented by dual-trigger confirmations and audit logs.

Agentification Phase 1: Human-in-Loop

Milestone	100% of compliance deadlines tracked with <1% missed filing incidents over 6 months; all reminders delivered 14 days in advance.
Pipeline	Fully Automated Pipeline Deadline Database > Scheduled Reminder Triggers > Confirmation Log > Escalation If Unconfirmed. Zero Human Decision Making Required; All Actions Rule Based. Audit Trail Provides Compliance Evidence.

3 Review standard contracts against approved templates

81%
HIGH

Description	Compare incoming contracts to the playbook, flag deviations, suggest edits
Frequency	Daily
Time per Task	30 min
Category	Analysis
Implementation	Easy
Annual Savings	106.2 hrs / €5,312

Recommendation

Option 1 -- Automation Engine: Contract AI (e.g. Kira Systems, LawGeex) €8,000-12,000/year. Compares incoming contracts against approved templates using NLP + rule-based deviation detection. Flags clause mismatches, suggests standardized edits. Setup 2-3 weeks (template library load, threshold tuning). Payback 6-8 weeks (30min daily 252 working days = 126 hours/year €3,150 at €25/hr fully-loaded).

Option 2 -- Custom Build: Internal LLM wrapper (Claude API + document chunking) €2,000 setup + €500/month. Lower accuracy than specialized tool but integrates with existing contract repository. Option 3 -- Hybrid (Recommended): Use Kira for high-stakes M&A/vendor contracts; simple template comparison (Word diff + checklist) for routine NDAs/MSAs. Escalate flagged deviations to legal counsel (5-10min review per contract).

Repeatability	85
Data Avail.	88
Error Tol.	72
Integration	80

Score confidence: **High** (how much the four sub-scores agree)

Risk

Template drift and precedent mutations; AI may miss contextual deviations that reflect intentional commercial negotiation patterns.

Agentification Phase 1: Human-in-Loop

Milestone	90% of routine NDA/MSA reviews completed with zero human review time within 6 weeks; escalation rate <15%.
Pipeline	Fully Automatable Pipeline Contract Ingestion > Template Comparison > Deviation Flagging > Batch Escalation Report To Counsel. Ai Layer Owns Detection; Human Layer Reviews Flagged Items Only. No Decision Layer Risk; Errors Are Caught In Counsel Review.

4 Answer routine legal and contract questions

73%

HIGH

Description	Respond to internal teams on standard clauses and policy using approved guidance
Frequency	Daily
Time per Task	12 min
Category	Communication
Implementation	Medium
Annual Savings	35.0 hrs / €1,750

Recommendation

AI Layer -- Internal LLM Interface (Claude, ChatGPT Enterprise) fine-tuned on approved guidance docs (policy playbook, FAQs, template library). Indexes searchable contracts and standard Q&As.; Generates draft answers to routine questions (e.g., "What does IP ownership mean in our standard SaaS agreement?"). Surfaces context + confidence score. Setup 1-2 weeks (knowledge base curation + prompt tuning). Cost €50-150/month for enterprise tier. Decision Layer -- Legal counsel (30min/week) reviews AI drafts before distribution. Counsel validates accuracy, tone, and org consistency; approves or rewrites. This step is non-delegable because contract interpretation carries fiduciary risk -- AI-only responses could expose the org to misinterpretation disputes. Human decides whether AI answer is sufficiently accurate for the questioner's role and risk context.

Option 2 -- Tiered Model: Tier A (Simple Policy Questions): AI answers directly (e.g., "When is leave accrual reset?") -- low legal risk. Tier B (Contract Interpretation): AI drafts; counsel approves before send. Tier C (Trade-offs, Precedent): Direct escalation to counsel.

Repeatability	78
Data Avail.	72
Error Tol.	68
Integration	75

Score confidence: **High** (how much the four sub-scores agree)

Risk

AI may generate plausible but incorrect interpretations of nuanced clauses; responses require legal review to avoid liability exposure and internal misalignment.

Agentification

Phase 1: Human-in-Loop

Milestone	AI generates responses to 70% of routine questions; counsel approval time <10min/response; 95% of approved answers rated "accurate and helpful" by internal stakeholders over 8 weeks.
Pipeline	Question Intake > Ai Draft Generation + Confidence Tagging > Counsel Review Queue (Batched 2X/Week) > Approval/Editing > Distribution. Counsel Remains Decision Authority On All Contract Interpretation; Ai Reduces Drafting Time Only. Handoff: If Ai Confidence <70%, Auto Escalate To Counsel Without Draft.

5 Prepare monthly compliance status report

59%

MEDIUM

Description	Summarize open obligations, risks and completed items for leadership
Frequency	Monthly
Time per Task	120 min
Category	Analysis
Implementation	Hard
Annual Savings	10.8 hrs / €540
Recommendation	AI Layer -- Data Aggregation & Visualization Engine. Use BI tool (Tableau, Looker, Power BI) + scheduling automation to pull monthly compliance data from task tracking system, extract: (1) open obligations (count, age, responsible party), (2) completed items (count, on-time rate), (3) flagged risks (deadline misses, audit findings). Auto-generate charts: timeline burndown, risk heatmap by category, completion velocity. Generates 80% of report content (raw data + standard visualizations). Setup 3-4 weeks (data pipeline + dashboard design). Cost €100-300/month. Decision Layer -- Legal/Compliance Lead (1-1.5 hours) reviews AI-generated data, applies judgment to: (1) Assess materiality of open items (which risks warrant escalation to exec leadership?). (2) Interpret context (is a missed deadline a process failure or an intentional strategic delay?). (3) Prioritize forward-looking actions (which 2-3 items need budget/headcount next quarter?). (4) Craft narrative for leadership (what story does the data tell, and what are the implications for org strategy?). Human writes executive summary, risk narrative, and recommendations. This layer CANNOT be delegated because: compliance reporting influences board-level governance decisions, resource allocation, and regulatory standing. An AI system cannot weigh political sensitivity, stakeholder priorities, or implicit org constraints. Human owns the framing of risk and the call on which items are truly "at risk" vs. "managed."
Repeatability	58
Data Avail.	65
Error Tol.	42
Integration	70

Score confidence: **High** (how much the four sub-scores agree)

Risk	CRITICAL -- This is a leadership-facing strategic report. AI data aggregation is valuable; however, risk prioritization, impact assessment, and forward-looking recommendations require human judgment and stakeholder context that AI cannot reliably infer. An AI-driven report that mislabels a low-impact item as "critical" or misses emerging regulatory risk causes loss of credibility and poor resource allocation.
Agentification	Phase 1: Human-in-Loop
Milestone	AI generates 80% of standard report data (tables, charts) within 5 working days of month-end; Lead spends 90min on narrative + decision-making; stakeholder feedback scores "accurate and actionable" at 4/5 over 3 months.
Pipeline	Automated Data Pipeline (Compliance Tracker > Bi Tool > Dashboard Refresh) > Human Review & Judgment Layer (Lead Interprets Data, Applies Risk Context, Writes Narrative) > Formatted Report Distribution. Handoff: Ai Surfaces All Open/Flagged Items With Raw Metrics; Lead Filters, Reorders, And Contextualizes For Leadership Audience. Non Automatable: Risk Interpretation, Stakeholder Alignment, Narrative Framing.

Implementation Roadmap

Phase 1 — Quick Wins

0–3 months

High score + easy setup = immediate ROI.

- > **Maintain the contract and document repository** Score 91% · 36 hrs saved
- > **Track compliance deadlines, filings and renewals** Score 89% · 23 hrs saved
- > **Review standard contracts against approved templates** Score 81% · 106 hrs saved

Phase 2 — Medium-Term

3–6 months

Technical setup required but significant savings.

- > **Answer routine legal and contract questions** Score 73% · 35 hrs saved

Phase 3 — Advanced

6–12 months

Complex automations and custom development.

- > **Prepare monthly compliance status report** Score 59% · 11 hrs saved

Team Automation Strategy

Team Velocity Impact

Metric	Value	Note
Hours freed / yr	211h	Available for product & growth
FTE equivalent	0.1	Roles redeployable to strategic work
Cost saved / yr	€10,540	At your team's hourly rate

Automation Rollout Timeline

Phase 1 — Quick Wins (0–3 months)	165h/yr · 3 tasks
Phase 2 — Medium-term (3–12 months)	35h/yr · 1 tasks
Phase 3 — Strategic (12–36 months)	11h/yr · 1 tasks

90-Day Sprint Plan

#	Task	Score	Hours/yr
1	Maintain the contract and document repository	91%	36h
2	Track compliance deadlines, filings and renewals	89%	23h
3	Review standard contracts against approved templates	81%	106h

Conclusion

This analysis identified automation opportunities across **5 tasks** in **Legal & Compliance Team Workflow**. Implementing recommendations could save **211 hours annually**, worth approximately **€10,540**.

- > Begin with Phase 1 quick wins — ROI within weeks, not months.
- > Use human-in-the-loop for tasks scored 40–70 to reduce risk.
- > Track time saved monthly to measure and communicate impact.
- > Revisit quarterly — new AI tools appear constantly.
- > Train team members on newly automated workflows.
