3 HIGH potential	2 MEDIUM potential	0 LOW potential
------------------	--------------------	-----------------

AI Readiness Assessment

76 / 100

Overall AI Readiness

How prepared your organisation is for AI automation based on data quality, process documentation, tool maturity and team skills.

Data Quality	81
Process Clarity	78
Tool Maturity	81
Error Tolerance	64

Detailed Task Analysis

1 Keep CRM records and deal stages current

90%

HIGH

Description	Log activities, update deal stages, fix stale or duplicate records
Frequency	Daily
Time per Task	15 min
Category	Data Entry
Implementation	Easy
Annual Savings	61.2 hrs / €3,062
Recommendation	Option 1 - HubSpot + Duplicate Killer (€50/mo) + Zapier workflows: Automated activity logging from email/calendar integrations, deal stage triggers based on CRM event rules, weekly dedup scan. Setup 8h, payback 6 weeks (15min 250 days = ~62.5h/year = €2,812 value). Option 2 - Salesforce Einstein Activities + Flow automation (€165/mo seat): More robust for large teams, tighter CRM integration, steeper setup. Recommended: Option 1 for B2B SaaS SMB/growth stage; scale to Option 2 at €10M+ ARR.
Repeatability	94
Data Avail.	91
Error Tol.	88
Integration	89

Score confidence: **High** (how much the four sub-scores agree)

Risk	Duplicate detection relies on fuzzy matching; periodic manual audit required to prevent data fragmentation.
Agentification	Phase 1: Human-in-Loop (monthly dedup validation)
Milestone	99%+ deal records current (stage/activity) with <0.5% manual correction rate; zero stale records >30 days old.
Pipeline	Email/Call Events > Zapier Trigger > Auto Log Activity To Crm > Stage Transition Rules (E.G., Demo Attended > Opportunity) > Nightly Dedup Scan > Report Flagged Duplicates For Human Review. Weekly Reconciliation: Sales Ops Validates 5% Sample.

2 Enrich and route inbound leads to reps

87%

HIGH

Description	Look up company data, score the lead, assign to the right rep by territory/segment
Frequency	Daily
Time per Task	7 min
Category	Data Entry
Implementation	Easy
Annual Savings	27.7 hrs / €1,385
Recommendation	Option 1 - HubSpot + Apollo.io (€120/mo combined): Automated company enrichment via API, rules-based lead scoring, territory assignment by rep capacity. Setup 12h, payback 8 weeks (7min 250 working days = ~29h/year saved @ €45/hr burdened = €1,305 value). Option 2 - Zapier + Clearbit + custom routing rules (€80/mo): Lighter integration, slower iteration on scoring logic, acceptable for <500 leads/month. Recommended: Option 1 for velocity and auditability.
Repeatability	92
Data Avail.	88
Error Tol.	82
Integration	85
Score confidence: High (how much the four sub-scores agree)	
Risk	Lead scoring weights may drift if market segment mix changes; validation required quarterly.
Agentification	Phase 1: Human-in-Loop (initial scoring review, territory rules validation)
Milestone	100 consecutive leads routed with <3% manual correction rate over 2 weeks; rep feedback loop closed.
Pipeline	Inbound Lead > Clearbit Enrichment > Hubspot Scoring Engine (Rule Based: Company Size, Industry, Engagement Signals) > Territory Router > Crm Assignment > Daily Rep Digest. Human Validates Scoring Drift Monthly.

3 Generate and send quotes and proposals

75%

HIGH

Description	Build a quote from the price book, apply approved discounts, send for signature
Frequency	Weekly
Time per Task	35 min
Category	Management
Implementation	Medium
Annual Savings	23.7 hrs / €1,183

Recommendation

AI layer -- Pull deal data (prospect company, product tier, volume, contract term, customer segment). Cross-reference price book and approved discount matrix (e.g., tier-based, volume-based, retention discounts up to 20%). Generate quote with line items, total price, and discount justification. Flag any discount >15% or contract term >36 months for human review. Decision layer -- Account Executive or Sales Manager reviews AI-generated quote, confirms discount is within authority or escalates for approval, applies any relationship-based adjustments (e.g., non-standard terms, multi-year bundling, new market entry). Cannot be delegated because discount authority, competitive context, and customer lifetime value calculations require human judgment and implicit org knowledge. Send only after human approval signature.

Repeatability	76
Data Avail.	82
Error Tol.	62
Integration	79

Score confidence: **High** (how much the four sub-scores agree)

Risk

Discount approval and contract terms involve business judgment; AI-applied discounts may violate margin guardrails or approval thresholds if applied without human review.

Agentification

Phase 2: Supervised (AI generates + flags, human approves + signs)

Milestone	85% of AI-generated quotes approved without revision; average quote turnaround 24h; zero unauthorized discounts applied.
Pipeline	Opportunity Closed Won Stage > Ai Triggers Quote Generation > Price Book Lookup + Discount Matrix Applied > Flag High Discount Or Long Term Deals > Ae/Manager Review > Manual Adjustments If Needed > E Sign Integration > Prospect Delivery. Audit: Monthly Reconciliation Of Applied Discounts Vs. Approved Thresholds.

4 Build the weekly pipeline and forecast report

68%

MEDIUM

Description	Pull pipeline by stage, weight by probability, summarize forecast vs quota
Frequency	Weekly
Time per Task	75 min
Category	Reporting
Implementation	Hard
Annual Savings	33.8 hrs / €1,690

Recommendation

AI layer -- Extract pipeline by stage, opportunity size, and close date from CRM. Apply historical win-rate and stage-progression probabilities per rep/segment. Surface: (a) weekly weighted forecast (€XXk revenue by close date), (b) variance from quota (%), (c) deals at risk (flagged by inactivity, stage delay, or sentiment analysis), (d) rep-level forecast confidence score. Highlight: data quality flags (missing fields, outliers, recent stage changes). Decision layer -- Sales leadership (VP Sales/Sales Manager) interprets forecast in context of: rep execution velocity, competitive landscape (not in data), prospect economic conditions (macro signals AI cannot model), internal capacity constraints, and prior quarter miss/beat patterns. Human decides: (i) which deals to push/hold, (ii) which reps need coaching or resource reallocation, (iii) whether to flag internal stakeholders for miss risk. Cannot be delegated because the forecast informs CEO guidance, board reporting, and hiring/retention decisions -- an AI error here damages credibility and triggers wrong org decisions. AI saves 60% of data-prep time only; human judgment is the value.

Repeatability	68
Data Avail.	84
Error Tol.	38
Integration	81

Score confidence: **Medium** (how much the four sub-scores agree)

Risk

Pipeline forecast relies on probability weighting, win-rate assumptions, and quota trade-offs; AI errors in stage progression or deal size estimates cascade to revenue planning, sales compensation, and executive decision-making. This is a strategic reporting task with high organizational impact.

Agentification

Phase 1: Human-in-Loop (AI prepares, leadership interprets and decides)

Milestone

Weekly forecast prepared by Monday 8am; 90% data completeness; leadership confidence in forecast 7/10 after 4-week validation cycle. Zero forecast surprises (misses flagged in advance).

Pipeline

Sunday Night: Automated Crm Extract > Data Quality Check (Flag Missing Close Dates, Extreme Deal Sizes, Stale Deals) > Win Rate Historical Lookup + Probability Weighting > Forecast Build (Best Case, Expected, Downside Scenario) > Deal Risk Flagging (Declined Activity, Stage Delay, Long Sales Cycle Alerts) > Report Delivered Monday Morning. Sales Leadership Review > Trade Off Decisions > Actions Logged (E.G., Deal Intervention, Rep Coaching, Forecast Adjustment) > Wednesday Re Forecast If Material Changes. Monthly Validation: Actual Close Vs. Forecast; Win Rate Recalibration.

5 Send personalized follow-up sequences

60%

MEDIUM

Description	Draft and send follow-up emails after calls/demos, adjusted per prospect		
Frequency	Daily		
Time per Task	12 min		
Category	Communication		
Implementation	Medium		
Annual Savings	32.5 hrs / €1,625		
Recommendation	AI layer -- Generate 3 follow-up email variants (tone: friendly/formal/casual) based on call transcript sentiment, prospect company size, and product interaction signals. Surface: (a) recommended send timing, (b) personalization fields detected, (c) flagged risks (e.g., competitor mention, budget concern). Decision layer -- Human sales rep selects variant, edits for relationship context, and approves send timing. Cannot be fully delegated because follow-up cadence depends on implicit trust signals and sales rep's read of the prospect's receptiveness (data AI cannot access from call notes alone).		
Repeatability			58
Data Avail.			62
Error Tol.			48
Integration			70
Score confidence: High (how much the four sub-scores agree)			
Risk	Tone, personalization depth, and prospect sentiment require human judgment; AI-drafted sequences may miss relationship nuance or trigger unsubscribes if template mismatch occurs.		
Agentification	Phase 2: Supervised (AI drafts, rep approves + customizes)		
Milestone	80% of AI-drafted sequences approved without revision by rep; click-through rate 22% on approved variants over 4 weeks.		
Pipeline	Call/Demo Completion > Ai Transcript Analysis > 3 Variant Generation + Timing Recommendation > Rep Review + Customization > Send Via Crm. Weekly A/B Test Report On Variant Performance Fed Back To Ai Prompt Refinement.		

Implementation Roadmap

Phase 1 — Quick Wins

0–3 months

High score + easy setup = immediate ROI.

- > **Keep CRM records and deal stages current** Score 90% · 61 hrs saved
- > **Enrich and route inbound leads to reps** Score 87% · 28 hrs saved

Phase 2 — Medium-Term

3–6 months

Technical setup required but significant savings.

- > **Generate and send quotes and proposals** Score 75% · 24 hrs saved
- > **Send personalized follow-up sequences** Score 60% · 32 hrs saved

Phase 3 — Advanced

6–12 months

Complex automations and custom development.

- > **Build the weekly pipeline and forecast report** Score 68% · 34 hrs saved

Team Automation Strategy

Team Velocity Impact

Metric	Value	Note
Hours freed / yr	179h	Available for product & growth
FTE equivalent	0.1	Roles redeployable to strategic work
Cost saved / yr	€8,946	At your team's hourly rate

Automation Rollout Timeline

Phase 1 — Quick Wins (0–3 months)	89h/yr · 2 tasks
Phase 2 — Medium-term (3–12 months)	56h/yr · 2 tasks
Phase 3 — Strategic (12–36 months)	34h/yr · 1 tasks

90-Day Sprint Plan

#	Task	Score	Hours/yr
1	Keep CRM records and deal stages current	90%	61h
2	Enrich and route inbound leads to reps	87%	28h

Conclusion

This analysis identified automation opportunities across **5 tasks** in **Sales Operations Team Workflow**. Implementing recommendations could save **179 hours annually**, worth approximately **€8,946**.

- > Begin with Phase 1 quick wins — ROI within weeks, not months.
- > Use human-in-the-loop for tasks scored 40–70 to reduce risk.
- > Track time saved monthly to measure and communicate impact.
- > Revisit quarterly — new AI tools appear constantly.
- > Train team members on newly automated workflows.
